

Course Outline

Microsoft Access 2007

Course Description:

Find out how to create a customer database. Learn how to build tables (including fields and records), enter data using forms, customize and print reports. Define various field properties within tables, and set a primary key. Run basic to advanced queries to extract information for analysis. Top tips for building from scratch or using wizards based on existing content.

This outline can be fully customized. Intro and Intermediate/Advanced levels.
