

Learning Management Systems (LMSs)

IN Training
solutions

LMS Features

- Create and manage courses.
- Create multiple versions of content.
- Share content across multiple courses.
- Create course catalogues.
- Edit course parameters.
- Register and track users.
- Create and manage tests and quizzes.
- Evaluation and reporting tools.
- Publish courses online or to cd.
- AICC and SCORM compliant.
- Fully customizable interface.
- Uses Microsoft technologies.

An LMS is a software platform that hosts online courses and manages the administration of training. The purpose is to provide an unlimited number of learners with a portal to access an unlimited number of courses, and for administrators to manage all users and roles.

Register users, access course catalogues, launch courses, record learner data, and run reporting.

IN Training Solutions expertise:

Specialists in eLearning – we develop training courses for self-paced learning (CBT/WBT) and instructor-led training (classroom).

Our approach – we work with your existing technology to create solutions that are cost-effective, easy to implement, and user-friendly.

- **Provides immediate access to online training.**
- **Reduces deliver costs per course.**
- **Delivers training with greater consistency.**

Interesting Facts

Technology based training has proven to have a 50-60% better consistency of learning than traditional classroom learning.
